

COMPRESSED AIR TREATMENT DRYING · FILTRATION · CONDENSATE MANAGEMENT

CLEAR
COMPRESSED AIR

CLEAN COMPRESSED AIR FOR THE MOST DEMANDING REQUIREMENTS

ALMiG Kompressoren GmbH

No industrial industrial or trade company can do without compressed air. It is used in such a wide variety of applications that it would be pointless to try to list them all.

To ensure the optimum utilisation of compressed air, it should be dry, clean and, in some cases, oil-free.

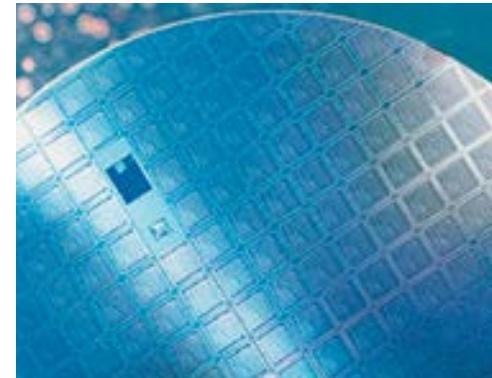

Compressed air treatment is therefore indispensable. However, if treatment is neglected or not

adapted to the individual requirement profile, this has an adverse effect on the entire compressed air system. This can lead to unnecessary production downtimes and shortens the service life of compressed air consumers.

Reason enough to ensure the correctly adjusted quality of compressed air for each individual application.

Why compressed air treatment

- prevents corrosion, wear and damage in the mains
- improves the economic efficiency of the compressed air system
- prolongs the service life of compressed air consumers
- reduces production costs significantly
- raises the quality of your products
- increases productivity

¹ 7 bars overpressure (Δp), based on the intake state of the compressor (1 bar, 20°C) | Operating overpressure max.: 16 bars (AS 30 – 2700) · 12 bars (AS 2400 – 12000)

Cyclone separators remove liquid water from compressed air.

Cyclone separators have been developed for treating compressed air in industrial applications. Thanks to an optimised design, the three-part housing with swirl insert offers low pressure differentials at high flow rates.

Due to the conical shape of the filter housing base, entrainment of separated aerosols can be ruled out. The turbulence-free zone in the lower section of the filter housing prevents condensate from the wet area, which has already been separated, from being carried away with the air flow.

Optionally, cyclone separators with electronic condensate drains are also available in the Premium version

Equipment features:

- standard version with float-type condensate drain
- premium version includes electronically controlled condensate drain to drain off condensate without any loss of compressed air

HIGH PERFORMANCE FILTERS

The optimum filter for any requirement profile:

Type of filter	Type	Particle size μm	Residual oil content ¹	Residual water con- tent ² (in liquid form) mg/m ³
Pre-filter	AFP	5	–	available
Micro-filter	AFM	1	0.1	not available ³
Submicro-filter	AFS	0.01	0.01	not available ³
Act. carbon filter	AFC	0.003	–	not available ³

¹ with an inlet concentration of 3 mg/m³

² details refer to a station without upstream compressed air dryer

³ the compressed air no longer contains residual water in liquid form; if the temperature is not reduced downstream from the filter elements (air is 100% saturated)

Compressed air filters ensure the provision of clean air for the most demanding requirements.

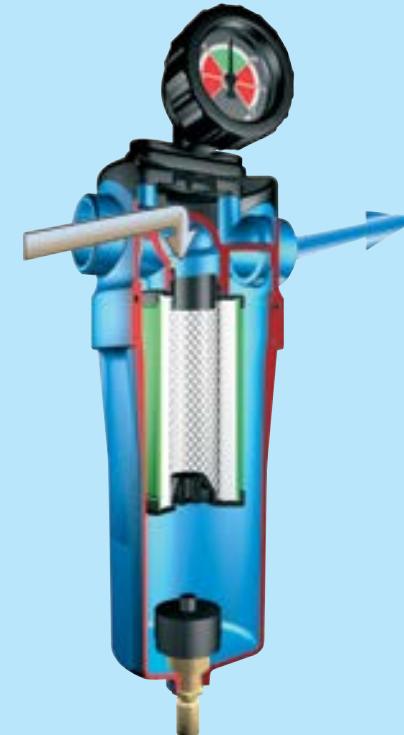

Compressed air filters can be used in a variety of applications. They are deployed wherever compressed air must be clean, dry and free from oil aerosols.

This is an exacting requirement profile considering that 1 m³ of compressed air at a final compression pressure of 10 bars can contain more than 2 billion particles and liquid molecules.

The ALMiG high performance filters are optimal to meet these requirements.

Equipment features:

- standard version, including
 - pressure differential indicator
 - float-type drain trap
- premium version, including
 - pressure differential manometer to indicate the most economically efficient time for changing the filter element
 - electronically controlled condensate drain to remove the condensate without any pressure loss

- three-section housing with bayonet joints for simple replacement and installation of filter elements
- extremely light aluminium housing with threaded connection volumetric flow rates ranging from 30 to 2640 m³/h
- alternatively, for volumetric flow rates ranging between 2700 and 10.800 m³/h, a steel housing with flanged connection

Conversion factors to other operating overpressures

The specified volumetric flow rates refer to a pressure of 7 bars. Volumetric flow rates at different pressures can be calculated using these corrective factors.

Designed flow rating

The volumetric flow rates through the filter element should be between 50 and 100% of the nominal volumetric flow rate. With higher or lower volumetric flow rates, the filtration efficiency deteriorates. The maximum volumetric flow rate must not be exceeded.

Refrigerant dryers – which can be fitted into any space.

Refrigerant dryers of the ADD series can be used flexibly and for a wide variety of applications

- as stand-alone units
- as wall-mounted units

- or as "dock-on" dryer kits"
(compressor plus refrigerant dryer)

These refrigerant dryers reduce production costs and increase productivity. An efficient, three-stage heat exchanger system ensures the reliable operation of the dryer up to an inlet temperature of +55°C.

Conversion factors:

In accordance with DIN ISO 7183 refrigerant dryers are designed for an operating overpressure of 7 bars, an ambient temperature of 25°C and an inlet temperature of 35°C. In the case of other operating overpressures and temperatures the above conversion factors apply.

Refrigerant dryers – tried, tested and powerful

The powerful refrigerant dryers of the ALM series are highly efficient quality dryers that have proved their worth a thousand times over. They are convincing because of high efficiency and reliability at inlet temperatures up to +58°C and a pressure dew point of +3°C.

In addition, this series is characterised by particularly large heat exchanger surface areas that guarantee a constant pressure dew point and a high degree of water separation even under extreme operating conditions.

ALM-CCD/CD heatless regenerative

adsorption dryer

Key data:

- Pressure dew point:
ALM-CCD: -40°C, -70°C
ALM-CD: -20°C, -40°C, -70°C
- Volume flows: 9 – 9400 m³/h
- Operating pressure: 3 – 16 bar (overpressure)
- Ambient temperature: 5 – 50°C

The ALM-CCD/CD are used wherever compressed air is being dried to a pressure dew point of -20°C, -40°C or -70°C. The series offer compact design and simple operation.

Advantages:

- Low maintenance costs
- Simple installation/operation
- Compact and space-saving
- Constant pressure dew point
- Guaranteed reliability

Design:

$$V_{\text{nom}} = 2000 \text{ m}^3/\text{h}$$

$$\text{Inlet temperature} = 30^\circ\text{C}$$

$$\text{Operating overpressure} = 10 \text{ bars}$$

$$V_{\text{corr}} = \frac{V_{\text{nom}}}{f_p \cdot f_T}$$

$$V_{\text{corr}} = \frac{2000 \text{ m}^3/\text{h}}{1.18 \cdot 1.05} = 1615 \text{ m}^3/\text{h}$$

Calculated dryer size:

ADSORPTION DRYER - HEAT REGENERATIVE • ALM-WD

ALM-WD heat-regenerative adsorption dryer

Key data:

- Pressure dew point: -40°C at 100% nominal load
- Volume flows: 245 – 4280 m³/h
- Operating pressure: 4 – 16 bar (overpressure)

- Ambient temperature: 5 – 50°C

At higher ratings in particular, heat-regenerative adsorption dryers are more efficient and most notably more cost effective to run than cold-regenerative ones.

Type ALM-WD	Nominal volumetric flow rate inlet ¹ m ³ /h	Dimensions			Weight kg	Connection

ACTIVE CARBON ADSORBER • ALM-AC

ALM-AC active carbon adsorber

Key data:

- Residual oil content: < 0.003 mg/m³
- Volume flows: 70 – 9300 m³/h
- Operating pressure: 5 – 16 bar (overpressure)
- Ambient temperature: 2 – 45°C

The ALM-AC active carbon adsorber supplies absolutely oil-free, taste- and odour-neutral compressed air and guarantees:

- Freedom from oil with a residual oil content < 0.003 mg/m³ through high adsorption of oil vapour. Inlet requirements: DTP +3°C

¹ Refers to intake status of 1 bar (abs) and 20°C, 7 bar (overpressure) and 35°C inlet temperature up to size 850 operating overpressure 5 – 16 bar
As of size 1100 operating overpressure 5 – 10 bar, 16 bar version on request

Operating overpressure Δp (bars)	5	6	7	8	9	10	11	12	13	14	15	16
Corrective factor f_p	0.75	0.88	1	1.06	1.12	1.17	1.22	1.27	1.32	1.37	1.41	1.46
Inlet temperature (°C)	25	30	35	40	45	50	55	60				
Corrective factor f_t	3.1	1.7	1	0.57	0.33	0.19	0.11	0.061				

- Active carbon life of around 10000 operating hours
- Complete operational reliability
- Maximum performance, safety and quality
- Constant efficiency

Design:

$$V_{\text{nom}} = 200 \text{ m}^3/\text{h}$$

$$\text{Inlet temperature} = 30^\circ\text{C}$$

$$\text{Operating overpressure} = 10 \text{ bars}$$

$$V_{\text{korr}} = \frac{V_{\text{nom}}}{f_p \cdot f_t}$$

$$V_{\text{korr}} = \frac{200 \text{ m}^3/\text{h}}{1.7 \cdot 1.17} = 100.5 \text{ m}^3/\text{h}$$

Calculated dryer size:

*optional heating: -5°C to +60°C

ALM-D condensate drain

The ALM-D are level-regulated, electronically controlled condensate drains which are used wherever effective, reliable and cost-effective condensate discharge is needed.

Advantages:

- No loss of pressure
- Drainage according to volumes produced
- No need to adapt to condensate type

- Generous internal drainage cross-sections
 - not sensitive to dirt or condensate containing particles
 - condensate does not tend to emulsify
- CO version for aggressive condensates
- Fully automatic monitoring with LED display
- Zero-wear sensor technology
- Fitted with potential-free contact as standard
- Components of relevance to maintenance easy to access
- 24V or 230V voltage supply

ALM-WS

Oil/water separation systems for environmentally-friendly condensate treatment.

The ALM-WS prepare compressed air condensates with an average oil content of 5% which makes them too environmentally damaging to be discharged in waste water without treatment. Their purpose is to obtain limit values that are in conformity with permissible discharge values.

Advantages:

- Operator- and service-friendly
- Simple, rapid filter change
- Waste water test kit included in scope of supply
- Reduced disposal costs
- Level indicator to monitor filter throughput
- Heating can be easily retrofitted at any time
- General building authority approval

INTELLIGENTE DRUCKLUFT MADE IN GERMANY

In line with the customer's needs

With our innovative system concepts we offer customised solutions for almost all applications. Our endeavour lies not only in supplying compressors, we

offer ourselves as a competent system provider capable of offering solutions to all users of compressed air. That does not only apply to the consultation and installa-

tion phase of your new compressor(s), but naturally continues in all areas of service, maintenance and visualisation.
